

## QM Certified Scoring (Insight)

QualityMetric's QM Certified Scoring (Insight) solution is ideal for organizations collecting large amounts of SF™ health survey data that want to have their data scored accurately and efficiently while ensuring proper interpretation.

**Assure the quality  
of your SF data  
through expert  
analysis by our  
world-renowned  
scientists.**

Here is how QM Certified Scoring (Insight) works. Datasets with survey responses are provided by the client to QualityMetric's Outcomes Insight Consulting™ Division, in either Excel or SAS format. This team of world-renowned, patient-reported outcome (PRO) scientists use proven scoring algorithms to score the datasets and identify any errors that may impact the scoring process or interpretation of results.

Key features:

- Includes eight health domain scores, plus physical and mental component summary measures.
- Applies Data Quality Evaluation (DQE) to proactively identify problems with data quality.
- Provides Missing Data Estimation (MDE), which incorporates algorithms for calculating scale and summary scores for partially completed surveys.
- Includes a comprehensive report in Word format, incorporating a summary of scores and results from tests performed on data to ensure it is consistent with measurement models required for proper interpretation.
- For some SF health surveys, clients can elect to have healthcare expenditure risk predicted for an individual, based on sample data and its corresponding percentile in the general population.
- For health economic evaluations, clients can request a Utility Index analysis be completed for some SF health surveys.

Each client is responsible for accurate documentation of datasets provided to QualityMetric.
